COME TO THE UK  
ROADSHOW!

16 DIFFERENT VENUES THROUGHOUT THE UK // STARTING VERY SOON!

CALL US: 01793 871 386

WWW.IONICSYSTEMS.COM

As the World is opening up after the pandemic, it has brought cleaning to the fore, ensuring premises are clean and ready for business is of high priority.

In 2021 our customers have been consistently reporting that they are expanding their customer base, and taking advantage of homeowners choosing to spend more on their residential properties, not only getting their windows cleaned, but gutters, patios and driveways too.

Soft Washing has been a major growth area in the UK in 2021, treating organic growth on surfaces, which has led cleaning professionals to look for practical and cost effective solutions for moss removal and roof cleaning. Ionic Systems are pleased to announce the launch of a chemical free method of roof cleaning that allows operatives to clean from the safety of the ground (See page 20).

# FOAMION

A Soft Washing add-on for your Reach & Wash® System

See & discuss Foamion™  
at the UK Roadshow  
SEE PAGE 8

## SOFT WASH WITH

## FOAM

**FOAMION™  
WORKS IN  
CONJUNCTION  
WITH ANY  
HOT OR COLD  
WATER REACH  
& WASH®  
SYSTEM"**

If you've looked into Soft Washing but haven't taken the plunge, it may be because you are concerned about bleach over-spray, or the concentration of the chemicals being used. Well you're not alone, many of those who Soft Wash have the same concerns and either spend time protecting neighbouring properties from over-spray or simply choose not to work on windy days.

One thing that there is no doubt about is that there is a demand for Soft Washing services, and the results can be spectacular.

Ionic's NEW Foamion™ Soft Washing system delivers foam to algae covered facades for excellent cleaning results.

Foamion™ can be used for moss and algae cleaning from rendered facades, roof tops and exterior walkways, driveways, decking, paved areas and more.

Foam controls over-spray perfectly and maintains 'dwell' time for better results when chemical is required.

*Foamion™ connects and works in conjunction with any hot or cold water Reach & Wash® System, meaning you can clean windows and carryout soft wash jobs as well.*

The Foamion™ system can be retro fitted and paired with many existing van installations. Foamion™ takes a pumped water feed from the existing Reach & Wash® system, which enters through a non-return valve. This eliminates the risk of any chemical contamination of the pure water system and delivery pumps, so window cleaning results are unaffected.

Having the Foamion™ operate in this way, allows a chemical feed and pure water to be applied at the same time, allowing operatives to soft wash and window clean simultaneously. The Foamion™ is a battery powered unit, so it can be used self-contained like a Reach & Wash® System.

Talk to us today to discover the benefits of Foamion™ over traditional soft washing or to arrange a demonstration.  
Call 01793 871 386 or visit [www.ionicsystems.com](http://www.ionicsystems.com)

“FOAM CONTROLS OVER-SPRAY PERFECTLY  
AND MAINTAINS ‘CONTACT’ TIME FOR BETTER  
RESULTS WHEN CHEMICAL IS REQUIRED!”

# FOAMION

## BENEFITS OVER TRADITIONAL SOFT WASHING

**Price: £4,500** (inc fitting)  
With 2 x 150Ah Lead Acid batteries  
and charger. **Lithium Iron battery**  
upgrade available.

- Uses foam to control over-spray – **reduces risks**
- Uses foam to maintain contact time – **improves cleaning**
- Uses foam to lock chemical in – **improves cleaning**
- Uses pure water to make foam – **makes more foam**
- High foam to water ratio – **uses significantly less water**
- High foam to water ratio – **no mains water required**
- High foam to water ratio – **significantly less run off**
- High foam to water ratio – **less chemical required/lower cost**
- Uses pure water – **less chemical required/lower costs**

## Ionic Systems can help you buy your new van during the global Semiconductor shortage

In the current climate, when it comes to buying a new van, one of the biggest problems is due to one of its smallest components: chips. A shortage in semiconductor chips, which are the 'brain' found inside every kind of electronic device, from PCs to TVs and vehicles too, has affected the supply and availability of new vans for over a year.

Semiconductor manufacturers temporarily shut down their operations as the coronavirus first took hold in early 2020, and their customers cut or cancelled orders, anticipating weaker consumer demand. However, the opposite happened and shoppers rushed to buy computers and other electronic devices to keep themselves entertained during lockdowns, and to enable working from home. Fear of Covid-19 also fuelled car sales, as people avoided public transport. Even though production has been returning to normal, shortages persist, which continues to have an effect on automotive manufacturing.

With that said, Ionic Systems have long standing relationships with many of the leading van manufacturers, and have continued to supply vans to customers throughout the pandemic. Utilising our preferential relationships, we have regular stock updates of current and future van availability, and the ability to keep waiting times to a minimum. Listed here are a small selection of 'in stock' Renault vans available to us right now, we have a full list of over 60 vans with a range of colours and trim levels to suit most preferences.

# CLAIM 130%

of equipment cost  
against Tax

With the announcement in the 2021 budget, there has never been a better tax break, to offset capital purchases of new cleaning equipment for your business.

Businesses can claim 130% of the cost against tax. In real terms every £100 you spend on cleaning equipment, classed as machinery, you can get a tax credit of £130.

This will cut your tax bill by 25p for every pound you invest in new equipment, for the two-year period the super deduction will be in effect.

Source: [www.theconstructionindex.co.uk/news/view/tax-breaks-for-machinery-investments](http://www.theconstructionindex.co.uk/news/view/tax-breaks-for-machinery-investments)

## THE COURSES

### WFP2 GETTING THE BEST FROM WATERFED POLES

This is our most popular course, and is appropriate for window cleaners at all levels who use (or plan to use) waterfed poles. Waterfed pole systems have revolutionised window cleaning, and are fast becoming the method of choice for window cleaners. This course focuses on how waterfed pole systems work, and on how to use waterfed poles on different types of buildings effectively.

**NEXT DATES:**

22/9/21 13/10/21 17/11/21

### SK1 WINDOW CLEANING SKILLS

SK1 Window Cleaning Skills is designed for the absolute beginner and assumes no previous window cleaning knowledge at all. The aim of the course is to equip candidates, usually new-comers to the trade, with the essential skills to become a professional window cleaner. Practical window cleaning tasks are covered, as well as basic business skills and techniques to start and grow a window cleaning business.

**NEXT DATES:**

14/9/21 12/10/21 16/11/21

**NEXT DATES:**

15/9/21 20/10/21 24/11/21

### HS3 HEALTH & SAFETY FOR WINDOW CLEANERS

HS3 Health and Safety for window cleaners is not simply a generic health & safety course. This course is tailored specifically for the window cleaner, and deals with the sorts of H&S issues that window cleaners face in their line of work. The course includes practical discussion on managing the health & safety of oneself and employees, as well as professional tips on reducing risk without affecting productivity.

**NEXT DATES:**

21/9/21 19/10/21 23/11/21

**NEXT DATES:**

23/9/21 21/10/21 25/11/21

### RW7 ROOF WAND ROOF CLEANING

The BWCA's newest course focuses on a revolutionary new way of cleaning roofs from the safety of the ground (See page 20). On this course, candidates will learn how the Roof Wand™ works, and why it should be considered as a safer alternative to other methods of roof cleaning. The energetic style of teaching allows candidates to learn the Health & Safety implications of this new method, while seeing first-hand the procedure and processes for setting up, using the equipment and cleaning down afterwards. The course will go through the different items of the Roof Wand™ equipment, that as a whole, make roof cleaning easier and safer.

**NEXT DATES:**

26/10/21 23/11/21

## MK4 MARKETING A WINDOW CLEANING BUSINESS

This course will help window cleaners at all levels to advance their business. The course covers a broad range of marketing techniques with a detailed explanation of what is likely to be effective, and what is not. This course would suit window cleaners who would like to advance their business, but are not sure about how to do so. This course is also suitable for those new to window cleaning, with instructions on building a customer base quickly and efficiently.

## SW5 SOFT WASHING

The BWCA's Soft Washing course is ideal for anyone either with or without experience looking to enter the Soft Wash market. On this course we will teach you how to reduce chemical usage and how to apply chemical solutions avoiding overspray, as well as how to choose the right chemicals for any task and comply with COSHH and Health & Safety regulations in the UK. SW5 has theory and practical elements to help you fully understand the world of Soft Washing.

# RAPIDO™

## ELECTRIC HOSE REEL

# Review

### PRICES:

£600 - Push button operation

£850 - Anti-snap speed controller

*\*Prices Exclude Hose, Hose fittings or fitting into a vehicle.*

Discuss Rapido™ at the UK Roadshow

SEE PAGE 8

Video

Earlier in 2021, Ionic launched the Rapido™ electric hose reel, and such was the interest that it swiftly became one of the standout products taken on the Spring UK Roadshow, with many attending to see and try the reel for themselves. Now six months on from the show, lots of Rapido's are fitted in vans, and being used daily. Ionic caught up with a few of the first Rapido™ owners to see how they have been getting on with the new addition to their Window Cleaning Setup.

### About Rapido™

The Rapido™ Reel is constructed from high quality stainless steel and shares the unrivalled spindle drum design of our tried and tested quality hose reel range. Rapido™ has a 10 year warranty on stainless parts. With a sleek plastic cover to protect the motor from water ingress, Rapido™ boasts 180 degree hose guide rollers, and is powered by the system's own battery. Ionic's quality without compromise design ethos is applied to Rapido™ throughout, and it's built to last, meaning you can expect many years of trouble free operation.

The Rapido™ reel is available as either a standard stop/start push button operation, or with a speed variable anti-snap controller.

The unique design allows for the detachable reel to be fitted and secured to the floor of a vehicle, or a portable trolley, or stacked on top of each other, maximising space saving (see image below).

The Rapido™ Reel can hold up to 100m of 8mm RX hose, which can be quickly and effortlessly reeled, and is housed in a sleekly designed encasement. Rapido™ has the assistance of a belt driven motor. The battery powered, low torque, high speed motor, allows the hose to be reeled onto the spindle at rapid speed, allowing operatives a time and effort saving benefit over manual reeling.

### What do Rapido™ owners think?

*"The Rapido™ is a brilliant Reel. I've owned and used other electric reels in the past, but the Rapido™ is my clear favourite, it's strong and robust enough for constant daily use, and it's clearly built to last! I've recently upgraded my system to the Ionic Zero (pictured) and the Rapido™ is a great, time & effort saving addition to my setup."*

**Alan James - Pristine Window Cleaning**

*"Having the Rapido™ has made my working day so much easier. Not only am I saving energy from not reeling manually all the time, but I'm also saving time at each job, which of course means more money each day, I could never go back to my floor-mounted manual reels now! I chose the Ionic reel as I've always received great products as well as great support from the after sales team, and I'm not disappointed! As they say, you get what you pay for."*

**Ben Kilding - H2o So Clean**

*"When I got my Rapido™, I thought I'd use it in addition to my manual reel, but within days of having it, I've used it at every single job! The amount of time and energy I'm saving, particularly when I clean several properties in a row, is quite remarkable. It looks great in my van too. I also like having the manual reel attachment, just as a backup option. All in all, in the short time I've owned my Rapido™, I could never go back to manual reeling!"*

**Dale Swatton-Andrews - DnS Cleaning**

# ROOF CLEANING

See and discuss  
Roof Wand™ at the  
UK Roadshows  
SEE PAGE 8

Watch our video which explains all the features of the Roof Wand in detail. Scan the QR code or visit the video gallery on our website  
[www.ionicsystems.com](http://www.ionicsystems.com)

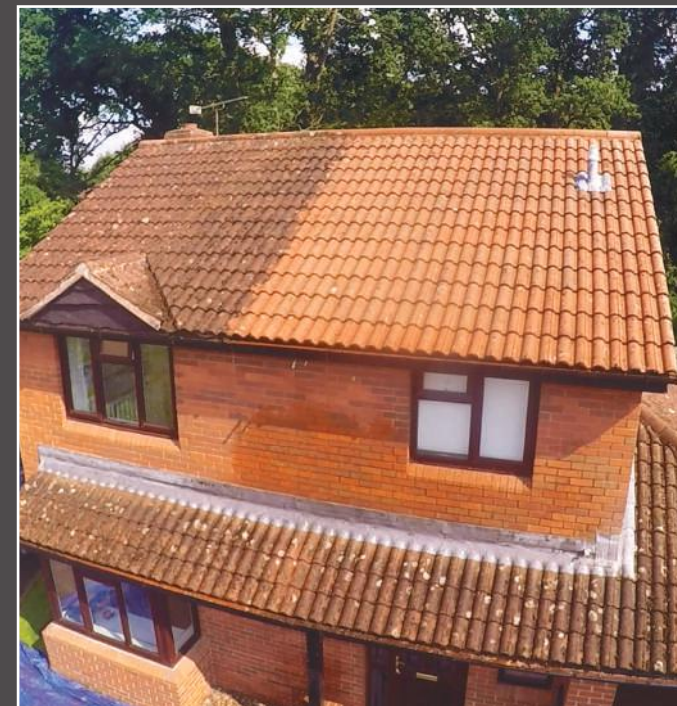

Until now, roof cleaning has always been a job that presents many challenges, either with costly forms of safe access, with the hire of scaffolding or powered access, and once you have gained access, the need to remove moss or lichen, before applying a biocide to kill the organic life living on there.

The NEW Ionic Roof Wand™ offers a safe form of access that allows the operative to work from the safety of the ground, to not only remove moss and lichen, but leave the tiles clean and the roof looking like new.

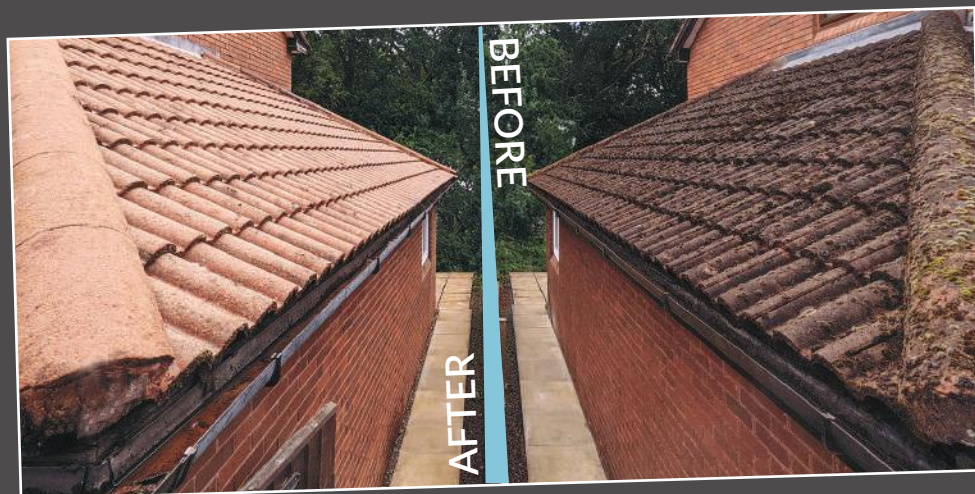

The uniquely patented, high pressure Roof Wand™ with turbo nozzles, allows for fast coverage of cleaning. The nozzles rotate at high speed to increase both the intensity and cleaning area of the spray.

As water is forced down onto the surface, it creates a hovering action which allows the operative to easily direct and control to wash down a roof.

The Roof Wand™ can be used with a telescopic mast, that allows the operative to gain access over roofs and difficult to access areas with ease and with limited effort.

The process is carried out by washing the building from roof top to floor, and catching all the moss, dirt and lichen onto waterproof sheets, before simply disposing of the waste. Check out the video that covers the whole process, to see how this new method is not only safe and effective, but the perfect cost effective solution for carrying out roof cleaning with ultra impressive results.

Thermo-fogging is without a doubt the quickest and most cost-effective way to effectively disinfect large spaces. Unlike other disinfecting systems, the entire space is filled with a highly effective (certified against Covid-19) Vanoquat fog.

# MICROFIBRE PADS

The telescopic pole is now the preferred method of access to carry out many cleaning tasks, with the operator working from the safety of the ground. The Ionic Hydra™ pole gives the operator many options, with its changeable head arrangements the pole can be used as a water fed pole with a brush, spray nozzle or traditional hand tool.

Ionic now offers a NEW Hydra™ head option, which allows the user to simply attach a pad holder (pictured left) to their pole, and use a choice of three different types of microfiber pad. These pads can either be used dry or with a liquid feed to apply a cleaning product, or simply make moist with water. Another option is a continuous water feed (via a rinse bar) to self clean the pads as you wash a surface.

The Ionic Microfibre Pads enable operatives to clean surfaces that are better suited to a cloth than a bristled brush. It's well known the benefits of Microfibre for being super absorbant, and for catching dust and dirt, with increased agitation. Microfibre is perfect for removal of stains without scratching hard surfaces. Microfibre also absorbs dirt and water leaving optically clear surfaces, so it's also an ideal choice when cleaning internal windows and facades at height.

The pads are machine washable at 60 degrees Celsius, so they can be used many times over before being replaced.

## PRICES:

**Pad Holder with Fan Jets\*** : £60

**Microfibre Pad : £13 Each**  
3 pad options (opposite)

\*Pad holders available to fit Hydra™ Gaffer, Swift, Vertigo Standard & Vertigo Q/R heads

## THE PADS

### SCRUBBABLE CHENILLE

Superior in catching dust and dirt by the added scrub function in the microfibre pile, it's able to wipe and sweep stains without scratching. The special bumps catch dust easily leaving a superior finish. Recommended for easily contaminated surfaces. It's low Friction and non-scratch.

### MIXED PP

Microfibre mixed with a scrubbing material for improved cleaning performance, recommended for all hard surfaces. The mixture of a 'cut scrub' material ensures optimum dust collection. This pad can be used wet or dry.

### PP STRIPE

2 in 1 cleaning Microfibre pad that carries out scrubbing and polishing of surfaces simultaneously. Quickly remove marks, stains or heavy dirt buildup. Strong absorptive microfibre material, no residue or streaks left on surfaces. Mainly used damp or wet.

## Used Ionic Systems, Refurbished and ready to go...

Occasionally, a customer will part-exchange their old Reach & Wash® System in order to upgrade to a new one.

We're always happy to offer part-exchange deals on our old machines, and in turn we refurbish them and offer them for sale.

Ionic Reach & Wash® Systems are known for their excellent reliability and long service life. It's not unusual for our customers to keep the same machine for over ten years, simply moving it from vehicle to vehicle as they are renewed.

This is mainly because we have always adopted a 'quality without compromise' approach to our manufacturing processes, but also because the main system components such as the stainless steel chassis and polypropylene tank, have no moving parts, and are not really subject to wear and tear.

As a result, we often have a stock of refurbished machines which were originally part-exchanged by a customer who has upgraded to a new machine.

Though not offering the very latest technology, these refurbished machines do offer a significant cost-saving compared to brand new, and as such are usually in high-demand.

For additional peace of mind, our refurbished machines are subjected to the same testing procedure as our newly manufactured systems, and are covered by a 6-month warranty.

## Re-Conditioning Process

A used Reach & Wash® Machine arrives at our facility in Swindon. Sometimes the system arrives on it's own, but more often our technicians de-install the system for the customer as part of the upgrade procedure.

After a full and detailed examination, the chassis is stripped of all of the components and the tank is removed for flushing. The steel frame is cleaned and then the abrasive blasting treats the stainless steel surface. At this point, the refurbished machine chassis is indistinguishable from a newly manufactured one.

The chassis is then re-united with the cleaned and pressure-tested tank, and any new components are mounted. The refurbished machine is then subjected to exactly the same testing procedure as a brand new system.

## Current used stock...

*"For additional peace of mind, our refurbished machines are subjected to the same testing procedure as our newly manufactured systems, and are covered by a 6-month warranty."*

### Pro 5 600L Thermopure™

**Tank Capacity:**
